

Location intelligence in Transportation

Product Offering

Live Positioning

A multi-platform indoor positioning system without the need for additional infrastructure.

Live Routing

Intelligent and accessible routing throughout indoor and outdoor spaces.

Live Location

Locate people or assets in real time – Tightly integrated into end user solution and GDPR-compliant.

Live Mapping

Feature rich mapping and cartography platform integrated across all our products.

Our SaaS product suite is designed to ensure quick integration and to provide value, while making it easy to add additional services as needs grow. Transportation industry use cases include:

- Fewer missed connections and improved on-time performance thanks to station/airport routing and mapping for passengers;
- Reduced deployment costs as a result of Living Map's hardware agnostic technology (in many cases beacons are not required);
- Improved passenger experience;
- Reduced operation costs and better service for PRM passengers through self-guided accessible navigation;
- Improvements in efficiency through location intelligent asset tracking and workforce management tools (including cargo management and below-the-wing).

Living Map have developed a combination of solutions and products solving wayfinding, passenger experience, and asset tracking, which can improve efficiency and productivity by enabling data-driven decision-making.
